

# Web View

Veryan WebView is the UK's most widely used and by far the most cost-effective Internet-based work experience management system for schools.

- ▲ WebView is very friendly and extremely versatile. It can be tailored to meet the precise local needs of any group of users.
- ▲ If appropriate, students can use the system from school and from home with their parent's involvement. The system supports student view-only or on-line job selection (generic or actual job descriptions).
- ▲ WebView can be configured to meet all the demands of both 'central booking' and 'school booking' work experience models – and any variant in between!
- ▲ Live links to the local agency's copy of Veryan's WorkPlace Education / Business administration software mean that a school's on-line activities (new job selections / bookings / health and safety checks to be instigated, etc) can be viewed and acted upon without delay.
- ▲ One copy of Veryan WebView can be used by any number of schools in any one Veryan WorkPlace area. What the school's staff can see and do is controlled by the WorkPlace administrators. What students can see and do is controlled by the school's staff.
- ▲ For school administrators WebView provides a wide variety of 'standard' reports *plus* a great mail-merge function that can be used to produce local paperwork in any desired format. Visits to students on placement are easy to record and a versatile 'flagging' system permits placement and document progress to be tracked with ease.
- ▲ The system is very powerful yet very easy to use. No software installation is required in school, just an Internet browser and an Internet connection.
